

Part I: Understanding the Context of the Data

1. What is the unit of observation in the data frame in the slides?
2. Which variables are categorical?
3. Which variables are numerical?
4. Do any of the variable have ambiguous data types to you? Why are they ambiguous?
5. Is there any discernible pattern to the manner in which the rows are ordered?
6. What is your guess for the units/format used to record the departure time? Said another way, what would a value of 1517 represent?
